Principle of the assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Phosphoinositide-3-Kinase Class-2-Alpha Polypeptide(PIK3C2a). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Phosphoinositide-3-Kinase Class-2-Alpha Polypeptide(PIK3C2a). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Phosphoinositide-3-Kinase Class-2-Alpha Polypeptide(PIK3C2a), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Phosphoinositide-3-Kinase Class-2-Alpha Polypeptide(PIK3C2a) in the samples is then determined by comparing the OD of the samples to the standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
