

## Human CR (Calretinin) ELISA Kit | CR elisa kit

Human CR (Calretinin) ELISA Kit

CATALOG #  
**AAA270459**

REACTIVITY  
**Human**

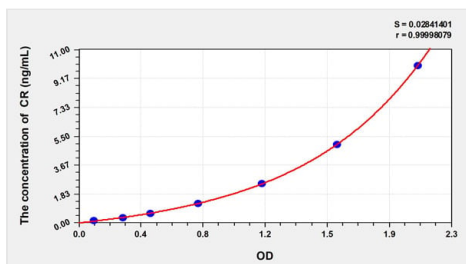

### PRODUCT SYNONYMS

CR (Calretinin); Human CR (Calretinin) ELISA Kit; CALB2; CAL2; CAB29; Calbindin 2; 29kDa;; CR elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                  |
|-------------------------|------------------------------------------------------------------|
| Reactivity              | Human                                                            |
| Samples                 | serum, plasma, tissue homogenates and other biological fluids    |
| Assay Type              | Sandwich                                                         |
| Detection Range         | 0.16-10 ng/mL                                                    |
| Sensitivity             | 0.055 ng/mL                                                      |
| Intra-assay Precision   | CV%<8%                                                           |
| Inter-assay Precision   | CV%<10%                                                          |
| Preparation and Storage | Store at 2-8 degree C. Stable for 6 months from date of receipt. |

### ADDITIONAL INFORMATION

#### Related Product Information for CR elisa kit

Principle of the assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Calretinin(CR). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Calretinin(CR). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Calretinin(CR), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of Calretinin(CR) in the samples is then determined by comparing the OD of the samples to the standard curve.

#### Product Categories/Family for CR elisa kit

Tumor immunity; Neuro science

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
