PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of TMEM173. No significant cross-reactivity or interference between TMEM173 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TMEM173 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TMEM173 elisa kit	Intended Uses: This TMEM173 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of HumanTMEM173. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: TMEM173 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-TMEM173 antibody and an TMEM173-HRP conjugate. The assay sample and buffer are incubated together with TMEM173-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TMEM173 concentration since TMEM173 from samples and TMEM173-HRP conjugate compete for the anti-TMEM173 antibody binding site. Since the number of sites is limited, as more sites are occupied by TMEM173 from the sample, fewer sites are left to bind TMEM173-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TMEM173 concentration in each sample is interpolated from this standard curve.
