

Human BLK (B-Lymphoid Tyrosine Kinase) ELISA Kit | BLK elisa kit

Human BLK (B-Lymphoid Tyrosine Kinase) ELISA Kit

CATALOG #
AAA272760

REACTIVITY
Human

PRODUCT SYNONYMS

BLK (B-Lymphoid Tyrosine Kinase); Human BLK (B-Lymphoid Tyrosine Kinase) ELISA Kit; Tyrosine-protein kinase BLK; p55-Blk; BLK elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Human BLK. No significant cross-reactivity or interference between Human BLK and analogues was observed.
Assay Type	Sandwich
Detection Range	0.16-10 ng/mL
Sensitivity	0.071 ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay)? CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision.
Inter-assay Precision	Inter-assay Precision (Precision between assays)? CV%<10%. Three samples of known concentration were tested in forty separate assays to assess inter-assay precision.
Preparation and Storage	Store at 2-8 degree C. Stable for 6 months from date of receipt.

ADDITIONAL INFORMATION

Related Product Information for BLK elisa kit

Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to B-Lymphoid Tyrosine Kinase(BLK). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to B-Lymphoid Tyrosine Kinase(BLK). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain B-Lymphoid Tyrosine Kinase(BLK), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of B-Lymphoid Tyrosine Kinase(BLK) in the samples is then determined by comparing the OD of the samples to the standard curve.
