ADDITIONAL INFORMATION

Related Product Information for GSK3b elisa kit	Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Glycogen Synthase Kinase 3 Beta(GSK3b). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Glycogen Synthase Kinase 3 Beta(GSK3b). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Glycogen Synthase Kinase 3 Beta(GSK3b), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Glycogen Synthase Kinase 3 Beta(GSK3b) in the samples is then determined by comparing the OD of the samples to the standard curve.
