

## General DC (Deoxycholate) ELISA Kit | DC elisa kit

General DC (Deoxycholate) ELISA Kit

CATALOG #  
**AAA275994**

REACTIVITY  
**General**

### PRODUCT SYNONYMS

DC (Deoxycholate); General DC (Deoxycholate) ELISA Kit; Deoxycholic Acid; Cholanoic Acid; 3a; 12a-dihydroxy-5b-cholanate; DC elisa kit

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | General                                                                                                                                                                               |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of General DC. No significant cross-reactivity or interference between General DC and analogues was observed. |
| Assay Type              | Competitive                                                                                                                                                                           |
| Detection Range         | 15.63-1000 ng/mL                                                                                                                                                                      |
| Sensitivity             | 4.99 ng/mL                                                                                                                                                                            |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay)? CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision.                |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays)? CV%<10%. Three samples of known concentration were tested in forty separate assays to assess inter-assay precision.                 |
| Preparation and Storage | Store at 2-8 degree C. Stable for 6 months from date of receipt.                                                                                                                      |

### ADDITIONAL INFORMATION

#### Related Product Information for DC elisa kit

**Principle of the Assay:** This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with Deoxycholate(DC) protein. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Deoxycholate(DC). Next,Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Deoxycholate(DC) in the samples is then determined by comparing the OD of the samples to the standard curve.
