

Fish SDHA (Succinate Dehydrogenase Complex Subunit A) ELISA Kit | SDHA elisa kit

Fish SDHA (Succinate Dehydrogenase Complex Subunit A) ELISA Kit

CATALOG #
AAA276147

REACTIVITY
Fish

PRODUCT SYNONYMS

SDHA (Succinate Dehydrogenase Complex Subunit A); Fish SDHA (Succinate Dehydrogenase Complex Subunit A) ELISA Kit; SDH2; SDHF; FP; Flavoprotein; Flavoprotein subunit of complex II; Succinate dehydrogenase [ubiquinone] flavoprotein subunit; mitochondrial; SDHA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Fish
Specificity	This assay has high sensitivity and excellent specificity for detection of Fish SDHA. No significant cross-reactivity or interference between Fish SDHA and analogues was observed.
Assay Type	Sandwich
Detection Range	31.25-2000 pg/mL
Sensitivity	11.81 pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay)? CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision.
Inter-assay Precision	Inter-assay Precision (Precision between assays)? CV%<10%. Three samples of known concentration were tested in forty separate assays to assess inter-assay precision.

ADDITIONAL INFORMATION

Related Product Information for SDHA elisa kit

Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Succinate Dehydrogenase Complex Subunit A(SDHA). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Succinate Dehydrogenase Complex Subunit A(SDHA). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Succinate Dehydrogenase Complex Subunit A(SDHA), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Succinate Dehydrogenase Complex Subunit A(SDHA) in the samples is then determined by comparing the OD of the samples to the standard curve.
