Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Pro Atrial Natriuretic Peptide(Pro-ANP). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Pro Atrial Natriuretic Peptide(Pro-ANP). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Pro Atrial Natriuretic Peptide(Pro-ANP), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of Pro Atrial Natriuretic Peptide(Pro-ANP) in the samples is then determined by comparing the OD of the samples to the standard curve.
