ELISA

ELISA analysis was performed by loading 100 uL per well of an anti-Human Fab (CH1) mAb at a concentration of 5, 2.5, 1.25, 0.625, 0.3125, 0.15625, 0.078, and 0.039 ug/mL across 100 ng per well of a human antibody pre-coated plate. The plate was incubated for 1 hour at 37°C. Detection was performed using TMB Substrate for 10 minutes at room temperature in the dark. The plate was stopped with 2M sulfuric acid. Absorbances were read on a spectrophotometer at 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
