

Human Prolactin ELISA Kit

Human Prolactin ELISA Kit

CATALOG #
AAA281556

REACTIVITY
Human

PRODUCT SYNONYMS

Prolactin; Human Prolactin ELISA Kit; Prolactin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Prolactin. No significant cross-reactivity or interference between Prolactin and analogues was observed.
Samples	Cell culture supernates, serum and plasma
Assay Type	Quantitative Sandwich
Sensitivity	< 0.124ng/mL
Intra-assay Precision	Three samples of known concentration were tested 20 times on one plate to evaluate the Intra-plate precision.
Inter-assay Precision	Three samples of known concentration were tested 20 times separate assays to evaluate the Inter-plate precision. Assay were using two lots of components.

ADDITIONAL INFORMATION

Related Product Information for Prolactin elisa kit

Principle of the Assay: This assay employs the quantitative sandwich enzyme immunoassay technique. A monoclonal antibody specific for Prolactin has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any Prolactin present is bound by the immobilized antibody. Following incubation unbound samples are removed during a wash step, and then a detection antibody specific for Prolactin is added to the wells and binds to the combination of capture antibody Prolactin in sample. Following a wash to remove any unbound combination, and enzyme conjugate is added to the wells. Following incubation and wash steps, a substrate is added. A colored product TMB is formed in proportion to the amount of Prolactin present in the sample. The reaction is terminated by addition of acid and absorbance is measured. A standard curve is prepared from seven Prolactin standard dilutions and Prolactin sample concentration determined.

Background/Introduction: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of Prolactin in cell culture supernates, serum and plasma.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
