IMAGES

IHC (Immunohistochemisry)
ARPC1A Antibody (Center) immunohistochemistry analysis in formalin fixed and paraffin embedded human brain tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of the ARPC1A Antibody (Center) for immunohistochemistry. Clinical relevance has not been evaluated.

FCM/FACS (Flow Cytometry)
Flow cytometric analysis of hela cells using ARPC1A Antibody (Center)(bottom histogram) compared to a negative control cell (top histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

WB (Western Blot)
Western blot analysis of ARPC1A antibody (Center) in Y79 cell line lysates (35ug/lane). ARPC1A (arrow) was detected using the purified Pab.

ADDITIONAL INFORMATION

Related Product Information for anti-ARPC1A antibody	ARPC1A is one of seven subunits of the human Arp2/3 protein complex. This subunit is a member of the SOP2 family of proteins and is most similar to the protein ARPC1B. The similarity between these two proteins suggests that they both may function as p41 subunit of the human Arp2/3 complex that has been implicated in the control of actin polymerization in cells. It is possible that the p41 subunit is involved in assembling and maintaining the structure of the Arp2/3 complex. Multiple versions of the p41 subunit may adapt the functions of the complex to different cell types or developmental stages.
