IMAGES

WB (Western Blot)
Western blot analysis of anti-MEK1 Antibody (S218/222) in A2058, A375 cell line lysates (35ug/lane). MEK1 (arrow) was detected using the purified Pab.

WB (Western Blot)
Western blot analysis of lysate from rat C6 cell line, using MEK1 Antibody (S218/222). AAA289071 was diluted at 1:1000. A goat anti-rabbit IgG H&L(HRP) at 1:5000 dilution was used as the secondary antibody. Lysate at 35ug.

ADDITIONAL INFORMATION

Related Product Information for anti-MAP2K1 antibody	MAP2K1 is a member of the dual specificity protein kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an essential component of MAP kinase signal transduction pathway, this kinase is involved in many cellular processes such as proliferation, differentiation, transcription regulation and development.
