IMAGES

IHC (Immunohistochemistry)

Kallikrein 7(KLK7) Antibody (Center) immunohistochemistry analysis in formalin fixed and paraffin embedded human skin tissue followed by peroxidase conjugation of the secondary antibody and DAB staining. This data demonstrates the use of Kallikrein 7(KLK7) Antibody (Center) for immunohistochemistry. Clinical relevance has not been evaluated.

WB (Western Blot)

KLK7 Antibody (S82) western blot analysis in MDA-MB231 cell line lysates (35ug/lane). This demonstrates the KLK7 antibody detected the KLK7 protein (arrow).

ADDITIONAL INFORMATION

Related Product Information for anti-KLK7 antibody	Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. The KLK7 enzyme is thought to be involved in the proteolysis of intercellular cohesive structures preceding desquamation, which is the shedding of the outermost layer of the epidermis.
