ADDITIONAL INFORMATION

Related Product Information for anti-GPRC6A antibody

Receptor activated by amino acids with a preference for basic amino acids such as L-Lys, L-Arg and L-ornithine but also by small and polar amino acids. The L-alpha amino acids response is augmented by divalent cations Ca (2+) and Mg (2+). Activated by extracellular calcium and osteocalcin. Seems to act through a G (q)/G (11) and G (i)-coupled pathway. Mediates the non-genomic effects of androgens in multiple tissue. May coordinate nutritional and hormonal anabolic signals through the sensing of extracellular amino acids, osteocalcin, divalent ions and its responsiveness to anabolic steroids.
