ADDITIONAL INFORMATION

Related Product Information for anti-ABCC13 antibody	This gene is a member of the superfamily of genes encoding ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, and White). This family member is part of the MRP subfamily, which is involved in multi-drug resistance, but the human locus is now thought to be a pseudogene incapable of encoding a functional ABC protein. Alternative splicing results in multiple transcript variants; however, not all variants have been fully described.Yabuuchi H., Biochem. Biophys. Res. Commun. 299:410-417(2002).Annilo T., Genomics 84:34-46(2004).Brun M.-E., Gene 312:41-50(2003).
