ADDITIONAL INFORMATION

Related Product Information for anti-APLNR antibody	There are at least two distinct receptor subtypes of angiotensin II: angiotensin II receptor, type 1 (AGTR1) and angiotensin II receptor, type 2 (AGTR2). Most of the effects of angiotensin II are mediated by the AGTR1 receptor. This gene is related to the AGTR1 gene by sequence similarity. It was cloned based on a conserved transmembrane domain found in members of the G protein-coupled receptor (GPCR) gene family. [provided by RefSeq]
