

Rabbit anti-Virus Seasonal H1N1 Neuraminidase Polyclonal Antibody | anti-NA antibody

Seasonal H1N1 Neuraminidase Antibody

CATALOG # AAA307067	HOST Rabbit	REACTIVITY Virus	APPLICATIONS ELISA
-------------------------------	-----------------------	----------------------------	------------------------------

PRODUCT SYNONYMS

Seasonal H1N1 Neuraminidase; Polyclonal Antibody; Seasonal H1N1 Neuraminidase Antibody; Seasonal Influenza A (H1N1) Neuraminidase Antibody; Seasonal Influenza A (H1N1) Neuraminidase; Influenza N1; flu N1; NA; anti-NA antibody

PRODUCT SPECIFICATIONS

Host	Rabbit
Reactivity	Virus
Clonality	Polyclonal
Specificity	This antibody is specific for Neuraminidase from the seasonal influenza (H1N1) and will not recognize the corresponding Neuraminidase sequence from the swine-origin influenza virus (A/California/14/2009 (H1N1)). Will not cross-react with peptide corresponding to the swine-origin influenza (H1N1) Neuraminidase.
Purity/Purification	Affinity chromatography purified via peptide column
Form/Format	Supplied in PBS containing 0.02% sodium azide.
Sequence Length	470
Applicable Applications for anti-NA antibody	ELISA
Immunogen Type	Peptide
Immunogen Description	Raised against a synthetic peptide from. The seasonal influenza (H1N1) Neuraminidase protein. This antibody is a cognate pair with product 5249.
Target Name	Seasonal H1N1 Neuraminidase
Preparation and Storage	Can be stored at -20 degree C, stable for one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.

IMAGES

ELISA

ELISA results using Seasonal H1N1 Neuraminidase antibody at 1 ug/mL and the blocking and corresponding peptides at 50, 10, 2 and 0 ng/mL.

ELISA

ELISA results using Seasonal H1N1 Neuraminidase antibody at 1 ug/mL and the blocking and corresponding peptides at 50, 10, 2 and 0 ng/mL.

ADDITIONAL INFORMATION

Related Product Information for anti-NA antibody	Influenza A virus is a major public health threat, killing more than 30, 000 people per year in the USA. In early 2009, a novel swine-origin influenza A (H1N1) virus was identified in specimens obtained from patients in Mexico and the United States. The virus spread quickly around the world and on June 11, 2009, the World Health Organization declared it a pandemic. Influenza A virus has one of sixteen possible Hemagglutinin (HA) surface proteins and one of nine possible Neuraminidase (NA) surface proteins. The Hemagglutinin protein facilitates viral attachment while Neuraminidase is involved in viral release. These proteins also elicit immune responses that prevent infection or independently reduce viral replication. The genetic make-up of this swine flu virus is unlike any other: it is an H1N1 strain that combines a triple assortment first identified in 1998 including human, swine, and avian influenza with two new pig H3N2 virus genes from Eurasia, themselves of recent human origin. The distinct antigenic properties of the new swine influenza virus compared with seasonal influenza A (H1N1) virus suggest that human immunity against new swine influenza virus is limited, although the age distribution of reported cases suggests some degree of protection in older age groups.
Product Categories/Family for anti-NA antibody	Total protein Ab

NCBI AND UNIPROT INFORMATION

NCBI GI #	168827347
Molecular Weight	51,665 Da
NCBI Official Full Name	neuraminidase
UniProt Protein Name	Neuraminidase
UniProt Gene Name	NA
UniProt Entry Name	B1AGS8_9INFA

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
