

General Aldosterone ELISA Kit | ALD elisa kit

General Aldosterone ELISA Kit

CATALOG #
AAA310043

REACTIVITY
General

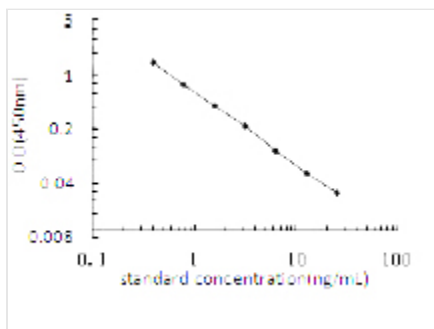

PRODUCT SYNONYMS

Aldosterone; General Aldosterone ELISA Kit; ALD; ALD elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay recognizes recombinant and natural General Aldosterone. No significant cross-reactivity or interference was observed. Note? Limited by current skills and knowledge, it is impossible for us to complete the cross- reactivity detection between general Aldosterone and all the analogues, therefore, cross reaction may still exist.
Samples	Serum, plasma, tissue homogenates, cell culture supernates, and other biological fluids
Assay Type	Quantitative Competitive
Detection Range	0.39-25.0 ng/mL.
Preparation and Storage	Store at 4 degree C

Intended Uses: This immunoassay kit allows for the in vitro quantitative determination of general Aldosterone concentrations in serum, plasma, tissue homogenates, cell culture supernates, and other biological fluids.

Principle of the Assay: The ELISA is based on the competitive binding enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Aldosterone. During the reaction, Aldosterone in the sample or standard competes with a fixed amount of biotin-labeled Aldosterone for sites on a pre-coated Monoclonal antibody specific to Aldosterone. Excess conjugate and unbound sample or standard are washed from the plate. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm $\pm$ 2 nm. The concentration of Aldosterone in the samples is then determined by comparing the O.D. of the samples to the standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
