

General Vitamin B12 ELISA Kit | VB12 elisa kit

General Vitamin B12 ELISA Kit

CATALOG #
AAA310048

REACTIVITY
General

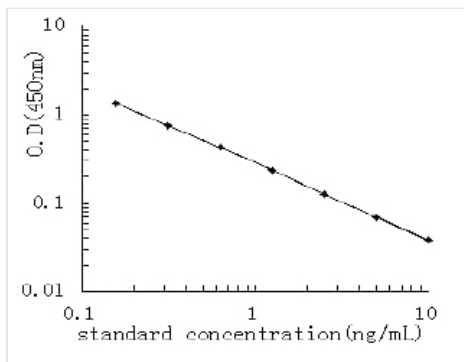

PRODUCT SYNONYMS

Vitamin B12; General Vitamin B12 ELISA Kit; VB12; cobalamin; VB12 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay recognizes recombinant and natural GeneralOxytocin. No significant cross-reactivity or interference was observed.
Samples	Serum, Plasma, Tissue Homogenates, Cell Culture Supernates, And Other Biological Fluids
Assay Type	Quantitative Competitive
Detection Range	15.6-1000pg/mL
Sensitivity	7.80pg/mL
Preparation and Storage	Store at 4 degree C

ADDITIONAL INFORMATION

Related Product Information for VB12 elisa kit	Intended Uses: This immunoassay kit allows for the in vitro quantitative determination of generalOxytocinconcentrations in serum, plasma, tissue homogenates, cell culture supernates, and other biological fluids. Principle of the Assay: The ELISA is based on the competitive binding enzyme immunoassaytechnique. The microtiter plate provided in this kit has been pre-coated with an antibody specific toOxytocin, During the reaction,Oxytocinin the sample or standard competes with a fixed amount of biotin-labeledOxytocin for sites on a pre-coated Monoclonal antibody specific to Oxytocin. Excess conjugate and unbound sample or standard are washed from the plate. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Thena TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The concentration of Oxytocin in the samples is then determined by comparing the O.D. of the samples to the standard curve.
