ADDITIONAL INFORMATION

Related Product Information for Mcam elisa kit	Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to Cell surface glycoprotein MUC18. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated polyclonal antibody preparation specific for Cell surface glycoprotein MUC18 and Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. Only those wells that contain Cell surface glycoprotein MUC18, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm ± 2 nm. The concentration of Cell surface glycoprotein MUC18 in the samples is then determined by comparing the O.D. of the samples to the standard curve. Intended Uses: This immunoassay kit allows for the in vitro quantitative determination of rat cell surface glycoprotein muc18, Cell surface glycoprotein MUC18 concentrations in serum, Plasma, tissue homogenates and Cell culture supernates and Other biological fluids.
