Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to NF-E2-related factor 2. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated polyclonal antibody preparation specific forNF-E2-related factor 2 and Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. Only those wells that contain NF-E2-related factor 2, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm $\pm$ 2 nm. The concentration of NF-E2-related factor 2 in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Intended Uses: This immunoassay kit allows for the in vitro quantitative determination ofhumanNF-E2-related factor 2concentrations in serum, Plasma,tissue homogenates and Cell culture supernates and Other biological fluids.
