

PLCG1 elisa kit

Phospho-PLCG1 (Tyr771) Colorimetric Cell-Based ELISA Kit

CATALOG # AAA315569	REACTIVITY Human, Mouse, Rat
-------------------------------	--

PRODUCT SYNONYMS

PLCG1; Phospho-PLCG1 (Tyr771) Colorimetric Cell-Based ELISA Kit; 1-phosphatidylinositol-4; 5-bisphosphate phosphodiesterase gamma-1; PLC-148; Phosphoinositide phospholipase C-gamma-1; Phospholipase C-II; PLC-II; Phospholipase C-gamma-1; PLC-gamma-1; PLC1; PLCG1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human, Mouse, Rat
Specificity	The Anti-PLCG1 (Phospho-Tyr771) Antibody is a rabbit polyclonal antibody. It was tested on Western Blots for specificity. The data in Figure 2 shows that a single protein band was detected. This protein band can be blocked by the synthesized immunogen peptide.
Form/Format	Two 96-Well Plates
Sequence Length	1291
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for PLCG1 elisa kit	Principle of the Assay: The PLCG1 (Phospho-Tyr771) Cell-Based ELISA Kit is a convenient, lysate- free, high throughput and sensitive assay kit that can monitor PLCG1 protein phosphorylation and expression profile in cells. The kit can be used for measuring the relative amounts of phosphorylated PLCG1 in cultured cells as well as screening for the effects that various treatments, inhibitors (ie. siRNA or chemicals), or activators have on PLCG1 phosphorylation. Background/Introduction: The Colorimetric Cell-Based ELISA Kit allows for the detection of various target proteins and the effects that certain stimulation conditions have on target protein expression in different cell lines. Qualitative determination of target protein concentration is achieved by an indirect ELISA format. In essence, the target protein is captured by target-specific primary (1 degree) antibodies while the HRP-conjugated secondary (2 degree) antibodies bind the Fc region of the 1 degree antibody. Through this binding, the HRP enzyme conjugated to the 2 degree antibody can catalyze a colorimetric reaction upon substrate addition. Due to the qualitative nature of the Cell-Based ELISA, multiple normalization methods are described: 1) a monoclonal antibody specific for human GAPDH is included to serve as an internal positive control in normalizing the target absorbance values. 2) Following the colorimetric measurement of HRP activity via substrate addition, the Crystal Violet whole-cell staining method is used to determine cell density. After staining, the results can be analyzed by normalizing the absorbance values to cell amounts, by which the plating difference can be adjusted. 3) If a phosphorylated target is being detected, an antibody against the non- phosphorylated counterpart will be provided for normalization purposes. The absorbance values obtained for the non-phosphorylated target can be used to normalize the absorbance values for the phosphorylated target.
