

Human Betacellulin CLIA Kit | BTC clia kit

Betacellulin (Human) LumiAb ELISA Kit

CATALOG #
AAA318521

REACTIVITY
Human

PRODUCT SYNONYMS

Betacellulin; Betacellulin (Human) LumiAb ELISA Kit; Human Betacellulin; BTC; BTC clia kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	The LumiAb Human BD-4 ELISA is capable of recognizing both recombinant and naturally produced Human BD-4 proteins. The antigens listed below were tested at 50 ng/ml and did not exhibit significant cross reactivity or interference.
Sequence Length	187
Assay Type	Quantitative Sandwich
Sensitivity	4 pg/ml.
Preparation and Storage	Store at 4 degree C for 6 months.

Standard Curve (Sample)

ADDITIONAL INFORMATION

Related Product Information for BTC clia kit	Principle of the Assay: The LumiAb Human BD-4 Chemiluminescent ELISA Kit contains the components necessary for quantitative determination of natural or recombinant Human BD-4 concentrations within any experimental sample including cell lysates, serum and plasma. This particular immunoassay utilizes the quantitative technique of a "Sandwich" Enzyme-Linked Immunosorbent Assay (ELISA) where the target protein (antigen) is bound in a "sandwich" format by the primary capture antibodies coated to each well-bottom and the secondary detection antibodies added subsequently by the investigator. The capture antibodies coated to the bottom of each well are specific for a particular epitope on Human BD-4 while the user-added detection antibodies bind to epitopes on the captured target protein. Amid each step of the procedure, a series of wash steps must be performed to ensure the elimination of non-specific binding between proteins to other proteins or to the solid phase. After incubation and "sandwiching" of the target antigen, a peroxidase enzyme is conjugated to the constant heavy chain of the secondary antibody (either covalently or via Avidin/Streptavidin-Biotin interactions), allowing for a sensitive luminescent reaction to ensue upon substrate addition. When the Peroxide Enhancer solution is added, the reaction catalyzed by peroxidase yields light that is representative of the antigen concentration. After a brief incubation, the microplate can be read with a luminometer, allowing for generation of a standard curve and subsequent determination of protein concentration!! Background/Introduction: Human BD-4, also known as Beta-Defensin 4, is a 72 amino acid cytokine protein, encoded by the DEFB104AB gene, which is commonly known for its antimicrobial activity via synergistic effects with lysozymes and Beta-Defensin 3. The antimicrobial activity displayed by BD-4 is commonly dependent upon the sodium chloride concentration in the vicinity of the cell such that the antibiotic capability is decreased as NaCl concentration increases and vice versa. The BD-4 peptide undergoes proteolytic processing further into its mature form via cleavage of its 22 residue signal sequence, resulting in the mature 50 residue BD-4 cytokine. The mature forms of all 4 types of Beta-Defensin cytokines are distinguished from their Alpha-Defensin counterparts such that they contain the characteristic 6 cysteine structural motifs via 3 disulfide linkages. Generally, defensins form a family of microbicidal and cytotoxic peptides made by neutrophils. Moreover, members of the defensin family are highly similar in protein sequence. In terms of tissue specificity, Human BD-4 is highly expressed in male testes while expressed much less in the female uterus. Furthermore, the cytokine is highly prevalent on the plasma membranes of gastric antrum while lower in neutrophils, thyroid glands, lungs and kidneys. Aside from its antimicrobial functions, human Beta-Defensin 4 is attracted via chemical stimuli towards immature dendritic cells and memory T-cells.

NCBI AND UNIPROT INFORMATION

NCBI GI #	398364697
NCBI GeneID	856848
NCBI Accession #	NP_011037.3
NCBI GenBank Nucleotide #	NM_001179002.3
UniProt Accession #	P40070
NCBI Official Full Name	U6 snRNA complex subunit LSM4
NCBI Official Symbol	LSM4
NCBI Official Synonym Symbols	SDB23; USS1
NCBI Protein Information	U6 snRNA complex subunit LSM4
UniProt Protein Name	U6 snRNA-associated Sm-like protein LSM4
UniProt Gene Name	LSM4
UniProt Synonym Gene Names	SDB23; USS1

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
