WB (Western Blot)

Western blot analysis of extracts from mouse brain, using AAK1 Antibody. Lane 1 was treated with the blocking peptide.

IF (Immunofluorescence)

AAA324005 staining HeLa cells by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100, then blocked in 10% serum for 45 minutes at 25 degree C. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37 degree C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) antibody, diluted at 1/600, was used as secondary antibody.

WB (Western Blot)

Western blot analysis of extracts from COS7 cells, using AAK1 antibody. The lane on the left is treated with the antigen-specific peptide.

ADDITIONAL INFORMATION

Related Product Information for anti-AAK1 antibody	Function: Regulates clathrin-mediated endocytosis by phosphorylating the AP2M1/mu2 subunit of the adaptor protein complex 2 (AP-2) which ensures high affinity binding of AP-2 to cargo membrane proteins during the initial stages of endocytosis. Isoform 1 and isoform 2 display similar levels of kinase activity towards AP2M1. Regulates phosphorylation of other AP-2 subunits as well as AP-2 localization and AP-2-mediated internalization of ligand complexes. Phosphorylates NUMB and regulates its cellular localization, promoting NUMB localization to endosomes. Binds to and stabilizes the activated form of NOTCH1, increases its localization in endosomes and regulates its transcriptional activity. Subunit Structure: Interacts with alpha-adaptin, AP-2, clathrin, NUMB and EPS15 isoform 2. Interacts with membrane-bound activated NOTCH1 but not with the inactive full-length form of NOTCH1. Preferentially interacts with monoubiquitinated activated NOTCH1 compared to the non-ubiquitinated form. Post-translational Modifications: Autophosphorylated. Similarity: Belongs to the protein kinase superfamily. Ser/Thr protein kinase family.
