ADDITIONAL INFORMATION

Related Product Information for anti-NLGN3 antibody	Function: Cell surface protein involved in cell-cell-interactions via its interactions with neurexin family members. Plays a role in synapse function and synaptic signal transmission, and may mediate its effects by clustering other synaptic proteins. May promote the initial formation of synapses, but is not essential for this. May also play a role in glia-glia or glia-neuron interactions in the developing peripheral nervous system (By similarity). Subunit Structure: Interacts with NRXN1, NRXN2 and NRXN3. Interacts (via its C-terminus) with DLG4/PSD-95 (via PDZ domain 3) (By similarity). Homodimer, and heterodimer with NLGN1 and NLGN2 (By similarity). Similarity: Belongs to the type-B carboxylesterase/lipase family.
