IHC (Immunohistochemistry)
At 1/100 staining rat kidney tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22 degree C. An HRP conjugated goat anti-rabbit antibody was used as the secondary

WB (Western Blot)
Western blot analysis of Phospho-MCM4 (Ser88) in lysates of COS7 nocodazole 1ug/ml 16h, using Phospho-MCM4 (Ser88) Antibody.

ADDITIONAL INFORMATION

Related Product Information for anti-MCM4 antibody	Description: Acts as component of the MCM2-7 complex (MCM complex) which is the putative replicative helicase essential for 'once per cell cycle' DNA replication initiation and elongation in eukaryotic cells. The active ATPase sites in the MCM2-7 ring are formed through the interaction surfaces of two neighboring subunits such that a critical structure of a conserved arginine finger motif is provided in trans relative to the ATP-binding site of the Walker A box of the adjacent subunit. The six ATPase active sites, however, are likely to contribute differentially to the complex helicase activity.
	Post Translational Modifications: Sumoylated; SUMO2 modified in response to stress caused by inhibition of proteasome activity (in vitro).
	Subunit Structure: Component of the MCM2-7 complex (PubMed:9305914, PubMed:16899510). The complex forms a toroidal hexameric ring with the proposed subunit order MCM2-MCM6-MCM4-MCM7-MCM3-MCM5 (Probable). Interacts with MCMBP (PubMed:17296731).
	Similarity: Belongs to the MCM family.
