ADDITIONAL INFORMATION

Related Product Information for WASF2 elisa kit	Principle of the Assay: Human Wiskott-Aldrich syndrome protein family member 2 (WASF2) ELISA Kit employs a two-site sandwich ELISA to quantitate WASF2 in samples. An antibody specific for Human WASF2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any WASF2 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugated WASF2 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of WASF2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
