

# Human Synaptotagmin-1 (SYT1) ELISA Kit | SYT1 elisa kit

Human Synaptotagmin-1 (SYT1) ELISA Kit

CATALOG #  
**AAA330638**

REACTIVITY  
**Human**

## PRODUCT SYNONYMS

Synaptotagmin-1 (SYT1); Human Synaptotagmin-1 (SYT1) ELISA Kit; SYT1; DKFZp781D2042; P65; SVP65; SYT; synaptotagmin 1; SYT1 elisa kit

## PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | Human Synaptotagmin-1 (SYT1) ELISA Kit has high sensitivity and excellent specificity for detection of Human SYT1. No significant cross-reactivity or interference between Human SYT1 and analogues was observed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Sequence Length         | 422                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Detection Method        | Colorimetric                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Usage Notes             | <ul style="list-style-type: none"> <li>* Do not mix components from different kit lots or use reagents beyond the kit expiration date.</li> <li>* Allow all reagents to warm to room temperature for at least 30 minutes before opening.</li> <li>* Pre-rinse the pipet tip with reagent, use fresh pipet tips for each sample, standard and reagent to avoid contamination.</li> <li>* Unused wells must be kept desiccated at 4 degree C in the sealed bag provided.</li> <li>* Mix Thoroughly is very important for the result. It is recommended using low frequency oscillator or slight hand shaking every 10 minutes.</li> <li>* It is recommended that all samples and standards be assayed in duplicate or triplicate.</li> </ul> |
| Preparation and Storage | Store at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Related Product Information for SYT1 elisa kit | <p>Description: This Human Synaptotagmin-1 (SYT1) ELISA Kit employs a two-site sandwich ELISA to quantitate SYT1 in samples. An antibody specific for SYT1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SYT1 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for SYT1 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of SYT1 bound in the initial step. The color development is stopped and the intensity of the color is measured.</p> <p>Background: The synaptotagmins are integral membrane proteins of synaptic vesicles thought to serve as Ca(2+) sensors in the process of vesicular trafficking and exocytosis. Calcium binding to synaptotagmin-1 participates in triggering neurotransmitter release at the synapse.</p> |
