Principle of the Assay: Human Platelet-Derived Growth Factor Receptor-Like Protein (PDGFRL) ELISA Kit employs a two-site sandwich ELISA to quantitate PDGFRL in samples. An antibody specific for PDGFRL has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PDGFRL present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugated Human PDGFRL detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of PDGFRL bound in the initial step. The color development is stopped and the intensity of the color is measured.

Background/Introduction: PDGFRL (Platelet Derived Growth Factor Receptor Like) is a Protein Coding gene. Diseases associated with PDGFRL include Colorectal Cancer and Hepatocellular Carcinoma. Gene Ontology (GO) annotations related to this gene include platelet activating factor receptor activity and platelet-derived growth factor beta-receptor activity.
