

Human Metallothionein-1X (MT1X) ELISA Kit | MT1X elisa kit

Human Metallothionein-1X (MT1X) ELISA Kit

CATALOG #
AAA331670

REACTIVITY
Human

PRODUCT SYNONYMS

Metallothionein-1X (MT1X); Human Metallothionein-1X (MT1X) ELISA Kit; MT1X; MT-1I; MT1; MT1X elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	Human Metallothionein-1X (MT1X) ELISA Kit has high sensitivity and excellent specificity for detection of Human MT1X. No significant cross-reactivity or interference between Human MT1X and analogues was observed.
Sequence Length	61
Assay Type	Sandwich ELISA (Quantitative)
Samples	Cell Culture Supernatants, Serum, Plasma, Other Biological Fluids
Detection Method	Colorimetric
Usage Notes	* Do not mix components from different kit lots or use reagents beyond the kit expiration date. * Allow all reagents to warm to room temperature for at least 30 minutes before opening. * Pre-rinse the pipet tip with reagent, use fresh pipet tips for each sample, standard and reagent to avoid contamination. * Unused wells must be kept desiccated at 4 degree C in the sealed bag provided. * Mix Thoroughly is very important for the result. It is recommended using low frequency oscillator or slight hand shaking every 10 minutes. * It is recommended that all samples and standards be assayed in duplicate or triplicate.
Preparation and Storage	Store at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for MT1X elisa kit	Description: This Human Metallothionein-1X (MT1X) ELISA Kit employs a two-site sandwich ELISA to quantitate MT1X in samples. An antibody specific for MT1X has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MT1X present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MT1X is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MT1X bound in the initial step. The color development is stopped and the intensity of the color is measured. Background: MT1X (Metallothionein 1X) is a Protein Coding gene. Among its related pathways are Metabolism and Response to metal ions. An important paralog of this gene is MT2A. Metallothioneins have a high content of cysteine residues that bind various heavy metals; these proteins are transcriptionally regulated by both heavy metals and glucocorticoids. May be involved in FAM168A anti-apoptotic signaling.

NCBI AND UNIPROT INFORMATION

NCBI GI #	10835232
NCBI GeneID	4501
NCBI Accession #	NP_005943.1
NCBI GenBank Nucleotide #	NP_005943.1
UniProt Accession #	P80297
NCBI Official Full Name	metallothionein-1X
NCBI Official Synonym Full Names	metallothionein 1X
NCBI Official Symbol	MT1X
NCBI Official Synonym Symbols	MT1; MT-1I
NCBI Protein Information	metallothionein-1X
UniProt Protein Name	Metallothionein-1X
UniProt Gene Name	MT1X
UniProt Synonym Gene Names	MT-1X; MT-IX
UniProt Entry Name	MT1X_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
