

Human Colon Cancer-Specific Antigen-2 (CCSA-2) ELISA Kit | CCSA-2 elisa kit

Human Colon Cancer-Specific Antigen-2 (CCSA-2) ELISA Kit

CATALOG #
AAA331996

REACTIVITY
Human

PRODUCT SYNONYMS

Colon Cancer-Specific Antigen-2 (CCSA-2); Human Colon Cancer-Specific Antigen-2 (CCSA-2) ELISA Kit; CCSA-2 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	Human Colon cancer-specific antigen-2 (CCSA-2) ELISA Kit has high sensitivity and excellent specificity for detection of Human CCSA-2. No significant cross-reactivity or interference between Human CCSA-2 and analogues was observed.
Assay Type	Sandwich ELISA (Quantitative)
Samples	Cell Culture Supernatants, Serum, Plasma, Other Biological Fluids
Detection Method	Colorimetric
Usage Notes	* Do not mix components from different kit lots or use reagents beyond the kit expiration date. * Allow all reagents to warm to room temperature for at least 30 minutes before opening. * Pre-rinse the pipet tip with reagent, use fresh pipet tips for each sample, standard and reagent to avoid contamination. * Unused wells must be kept desiccated at 4 degree C in the sealed bag provided. * Mix Thoroughly is very important for the result. It is recommended using low frequency oscillator or slight hand shaking every 10 minutes. * It is recommended that all samples and standards be assayed in duplicate or triplicate.
Preparation and Storage	Store at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for CCSA-2 elisa kit	Description: This Human Colon cancer-specific antigen-2 (CCSA-2) ELISA Kit employs a two-site sandwich ELISA to quantitate CCSA-2 in samples. An antibody specific for CCSA-2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any CCSA-2 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for CCSA-2 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of CCSA-2 bound in the initial step. The color development is stopped and the intensity of the color is measured. Background: Colorectal cancer (CRC), also known as bowel cancer and colon cancer, is the development of cancer from the colon or rectum (parts of the large intestine). A cancer is the abnormal growth of cells that have the ability to invade or spread to other parts of the body. Signs and symptoms may include blood in the stool, a change in bowel movements, weight loss, and feeling tired all the time.
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
