ADDITIONAL INFORMATION

Related Product Information for SLIT3 elisa kit	Background: Slit is a family of secreted extracellular matrix proteins which play an important signalling role in the neural development of most bilaterians (animals with bilateral symmetry). While lower animal species, including insects and nematode worms, possess a single Slit gene, humans, mice and other vertebrates possess three Slit homologs: Slit1, Slit2 and Slit3. Slit homolog 3 protein is a protein that in humans is encoded by the SLIT3 gene. Diseases associated with SLIT3 include Hepatic Adenomas, Familial and Diaphragm Disease. Among its related pathways are Development Slit-Robo signaling and Guidance Cues and Growth Cone Motility. Principle of the Assay: Mouse Slit Homolog 3 Protein (SLIT3) ELISA Kit employs a two-site sandwich ELISA to quantitate SLIT3 in samples. An antibody specific for SLIT3 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SLIT3 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugated Mouse SLIT3 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of SLIT3 bound in the initial step. The color development is stopped and the intensity of the color is measured.
