

Soil Acid Phosphatase (S-ACP) Detection Kit | S-ACP detection kit

Micro Soil Acid Phosphatase(S-ACP) Activity Assay Kit

CATALOG #
AAA332647

PRODUCT SYNONYMS

Soil Acid Phosphatase (S-ACP); Micro Soil Acid Phosphatase(S-ACP) Activity Assay Kit; Soil Acid Phosphatase(S-ACP) Activity; S-ACP detection kit

PRODUCT SPECIFICATIONS

Specificity	The kit provides a simple method for detecting Soil Acid Phosphatase (S-ACP) Activity
Samples	Soil sample
Features & Benefits	Determination of Soil Acid Phosphatase (S-ACP) Activity
Usage Notes	Do not mix or substitute reagents or materials from other kit lots or vendors. The sample preparation must be done on ice to prevent the enzyme inactivation, and the enzyme activity should be determined on the same day. avoid repeated freeze-thaw. Ensure all reagents and equipment are at the appropriate temperature before starting the assay.
Preparation and Storage	Stored at 4 degree C for 6 months, protected from light

ADDITIONAL INFORMATION

Related Product Information for S-ACP detection kit

Principle of the Assay: Soil phosphatase is a kind of enzyme that catalyzes the mineralization of soil organic phosphorus. Its activity directly affects the decomposition and transformation of organic phosphorus in soil and its bioavailability. It is an index to evaluate the direction and intensity of soil phosphorus biotransformation. Soil phosphatase is significantly affected by soil carbon content, nitrogen content, available phosphorus content and pH. According to the optimal pH range, it is generally divided into three types: acidic, neutral and alkaline. Soil acid phosphatase (S-ACP) can catalyze the hydrolysis of disodium phenylphosphate to produce phenol and disodium hydrogen phosphate in an acidic environment. The activity of soil acid phosphatase can be characterized by measuring the amount of phenol produced.
