

General uPA total antigen assay ELISA Kit | PLAU elisa kit

Rat uPA total antigen assay ELISA Kit

CATALOG #
AAA37730

REACTIVITY
General

PRODUCT SYNONYMS

uPA total antigen assay; Rat uPA total antigen assay ELISA Kit; PLAU elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Form/Format	Complete Kit
Sequence Length	432
Samples	Rat plasma
Preparation and Storage	Store at 4 degree C. Shelf Life: 12 months from manufacture, see label for expiration date

Intended Uses: Rat uPA total antigen assay is intended for the quantitative determination of total plasminogen activator antigen in rat plasma.

Principle of the Assay: Rat uPA will bind to the capture antibody coated on the microtiter plate. Free, latent, and complexed enzyme will react with the capture antibody on the plate. After appropriate washing steps, polyclonal anti-rat uPA primary antibody binds to the captured enzyme. Excess antibody is washed away and bound polyclonal antibody is then reacted with the secondary antibody conjugated to horseradish peroxidase. TMB substrate is used for color development at 450nm. A standard calibration curve is prepared along with the samples to be measured using dilutions of uPA.

Background: Urokinase plasminogen activator is a serine protease that activates plasminogen to plasmin in the blood fibrinolytic system. It is also implicated in events related to cell invasion/migration [3].
