ADDITIONAL INFORMATION

Related Product Information for anti-DYKDDDDK antibody	**Description:** Monoclonal antibodies are produced by immunizing mouse with synthetic peptide (DYKDDDDK), coupled to KLH. **Introduction:** A fusion tag called DYKDDDDK consists of eight amino acids (AspTyrLysAspAspAspAspLys) including an enterokinase-cleavage site. DYKDDDDK is specifically designed for immunoaffinity chromatography. It allows elution under non-denaturing conditions. Several antibodies against this peptide have been developed. One antibody denoted as M1 binds the peptide in the presence of bivalent metal cations preferably Ca(+). Elution is effected by chelating agents. Another strategy is competitive elution with excess of free DYKDDDDK Peptide. The DYKDDDDK peptide purifies and detects recombinant fusion proteins. DYKDDDDK peptide is useful in Western blotting, immunocytochemistry, immunoprecipitation, flow cytometry, protein purification, and in the study of protein-protein interactions, cell ultrastructure, and protein localization. DYKDDDDK peptide is a hydrophilic tag which significantly improves the detection and purification of recombinant fusion proteins.
