ADDITIONAL INFORMATION

Related Product Information for CMV recombinant protein	Description: The E Coli derived recombinant protein contains the CMV Pp28 (UL99) immunodominant regions, 130-160 amino acids. Introduction: The human cytomegalovirus UL99-encoded pp28 is a myristylated phosphoprotein that is a constituent of the virion. The pp28 protein is positioned within the tegument of the virus particle, a protein structure that resides between the capsid and envelope. In the infected cell, pp28 is found in a cytoplasmic compartment derived from the Golgi apparatus, where the virus buds into vesicles to acquire its final membrane.
Product Categories/Family for CMV recombinant protein	Viral Antigens; CYTOMEGALO VIRUS; Viral Antigens; Cytomegalo
