

## Mumps Virus Nucleoprotein Recombinant Protein | Mumps recombinant protein

Recombinant Mumps Virus Nucleoprotein

|                              |                                  |
|------------------------------|----------------------------------|
| CATALOG #<br><b>AAA39115</b> | HOST<br><b>Escherichia Coli.</b> |
|------------------------------|----------------------------------|

### PRODUCT SYNONYMS

Mumps Virus Nucleoprotein; Recombinant Mumps Virus Nucleoprotein; Mumps; Mumps Virus Nucleoprotein Recombinant; Mumps recombinant protein

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Host                    | Escherichia Coli.                                                                                                                                                                                                                             |
| Purity/Purification     | Protein is >95% pure as determined by 12% PAGE (coomassie staining).                                                                                                                                                                          |
| Form/Format             | (1.23mg/ml) Phosphate buffer, pH 7.4.                                                                                                                                                                                                         |
| Appearance              | Sterile Filtered colorless solution.                                                                                                                                                                                                          |
| Preparation and Storage | Store at 4°C if entire vial will be used within 2-4 weeks.<br>Store, frozen at -20°C for longer periods of time.<br>For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).<br>Avoid multiple freeze-thaw cycles. |

### ADDITIONAL INFORMATION

|                                                           |                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for Mumps recombinant protein | <b>Description:</b> Full length mumps viral nucleoprotein was expressed from E Coli, the recombinant protein was purified by affinity chromatography technique. The expressed recombinant mumps viral nucleoprotein contains 553 amino acids and a 6 x histidine tag was fused at its N-terminus, having a total Mw of 62kDa. |
| Product Categories/Family for Mumps recombinant protein   | <b>MUMPS PROTEIN;</b> <b>Viral Antigens;</b> <b>Mumps</b>                                                                                                                                                                                                                                                                     |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
