ADDITIONAL INFORMATION

Related Product Information for anti-AIG1 antibody	AIG1 Antibody: Androgen-induced 1 (AIG1) is a novel Pirh2-interacting protein, which was initially cloned from human dermal papilla cells and is evolutionally conserved from drosophila through to humans. It is a membrane protein and belongs to the protein family containing FAR-17a domain. AIG1 may play a role in androgen-regulated growth of hair follicles. AIG1 could serve as a new biomarker for the identification and prognostic evaluation of HCCs and may be a novel candidate tumor suppressor.
