IHC (Immunohistochemistry)
Immunohistochemistry of GOLGIN97 in rat stomach tissue with GOLGIN97 antibody at 5 µg/mL.

WB (Western Blot)
Western blot analysis of GOLGIN97 in human stomach tissue lysate with GOLGIN97 antibody at 1 µg/mL in (A) the absence and (B) the presence of blocking peptide.

ADDITIONAL INFORMATION

Related Product Information for anti-GOLGA1 antibody	GOLGIN97 was initially isolated as a Golgi complex autoantigen associated with Sjogren's syndrome, a chronic autoimmune disease in which the body's white blood cells destroy the exocrine glands, specifically the salivary and lacrimal glands (1,2). GOLGIN97 plays a role as a tethering molecule in endosome to the trans-Golgi network (TGN) retrograde traffic (3). FIP1/RCP binding to GOLGIN97 is required for tethering and fusion of recycling endosome retrograde transport vesicles to the TGN (4).
