ADDITIONAL INFORMATION

Related Product Information for PTH elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Paired Box Protein Pax-6 (also known as Pax-6) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human Pax-6 antibody. Pax-6 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human Pax-6 Antibody is added and binds to Pax-6 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Pax-6 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human Pax-6. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
