ADDITIONAL INFORMATION

Related Product Information for sICAM-1 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Soluble Intercellular Adhesion Molecule-1 (also known as sICAM-1) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human sICAM-1 antibody. sICAM-1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human sICAM-1 Antibody is added and binds to sICAM-1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated sICAM-1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human sICAM-1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
