Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Hypoxia-inducible Factor 1 Alpha (also known as HIF-1Alpha) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse HIF-1Alpha antibody. HIF-1Alpha present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse HIF-1Alpha Antibody is added and binds to HIF-1Alpha in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HIF-1Alpha antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse HIF-1Alpha. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
