Intended Uses: This sandwich kit is for the accurate quantitative detection of human Stromelysin-1 (also known as ST1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human ST1 antibody. ST1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human ST1 Antibody is added and binds to ST1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ST1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human ST1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
