ADDITIONAL INFORMATION

Related Product Information for IL-2sRbeta elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Soluble Interleukin-2 Receptor (also known as IL-2SRA) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human IL-2SRA antibody. IL-2SRA present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human IL-2SRA Antibody is added and binds to IL-2SRA in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated IL-2SRA antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human IL-2SRA. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
