Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Cluster of Differentiation 133 (also known as CD133) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse CD133 antibody. CD133 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse CD133 Antibody is added and binds to CD133 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated CD133 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse CD133. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
