ADDITIONAL INFORMATION

Related Product Information for MAG Ab elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Anti-myelin Associated Glycoprotein Antibody (also known as MAG Ab) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human MAG Ab antibody. MAG Ab present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human MAG Ab Antibody is added and binds to MAG Ab in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated MAG Ab antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human MAG Ab. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
