

## Human Hemogen (HEMGN) ELISA Kit | HEMGN elisa kit

Human Hemogen (HEMGN) ELISA Kit

CATALOG #  
**AAA42002**

REACTIVITY  
**Human**

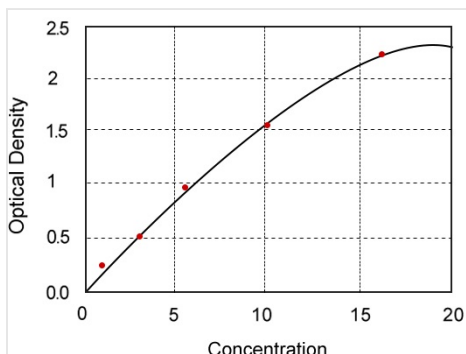

### PRODUCT SYNONYMS

Hemogen (HEMGN); Human Hemogen (HEMGN) ELISA Kit; HEMGN elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Human                                                                    |
| Sequence Length         | 484                                                                      |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 0.2ng/ml - 70ng/ml                                                       |
| Sensitivity             | 0.096ng/ml                                                               |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for HEMGN elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of human Hemogen (also known as HEMGN) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human HEMGN antibody. HEMGN present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human HEMGN Antibody is added and binds to HEMGN in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HEMGN antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human HEMGN. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
