ADDITIONAL INFORMATION

Related Product Information for SCCAg 2 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human SCCAg-2 antibody. SCCAg-2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human SCCAg-2 Antibody is added and binds to SCCAg-2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SCCAg-2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human SCCAg-2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Squamous Cell Carcinoma Antigen 2 (also known as SCCAg-2) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
