Intended Uses: This sandwich kit is for the accurate quantitative detection of human Beta-Glucuronidase (also known as B-GD) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human B-GD antibody. B-GD present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human B-GD Antibody is added and binds to B-GD in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated B-GD antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human B-GD. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
