

## Mouse apoptosis inducing factor, AIF ELISA Kit | AIF elisa kit

Mouse apoptosis inducing factor, AIF ELISA Kit

CATALOG #  
**AAA42381**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

apoptosis inducing factor; AIF; Mouse apoptosis inducing factor; AIF ELISA Kit; AIF elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                    |
| Sequence Length         | 225                                                                      |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 5ng/L - 2000ng/L                                                         |
| Sensitivity             | 2.41ng/L                                                                 |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for AIF elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of Mouse Apoptosis Inducing Factor (also known as AIF ) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay ( ELISA). The plate has been pre-coated with Mouse AIF antibody. AIF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse AIF Antibody is added and binds to AIF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated AIF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse AIF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
